ADDITIVE INJECTION
FOR PreciCONTROL

COMPACT! Pump + Measurement **ALL-IN-ONE**

**Integral
real-time
Injection
verification**

169 mm
**ORIGINAL
SIZE!**
4.2 kg

FEATURES

- Pneumatically powered
- Self priming
- Visually verifiable functionality
- 100% monitored

PreciMIX ADDITIVE INJECTION FOR PreciCONTROL

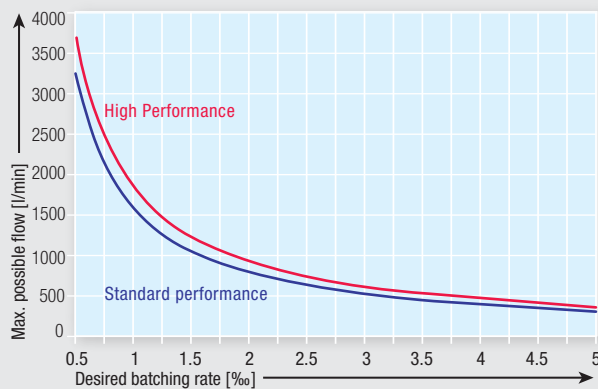

PreciMIX additive injection devices are pneumatically driven displacement piston pump type injectors.

The superior injection accuracy and verification is assured by the piston's entire physical movement monitoring with integral NAMUR limit switches and its transparent cylinder for an easy additional visual inspection. With PreciCONTROL, operation in ATEX Zone 1 is permitted.

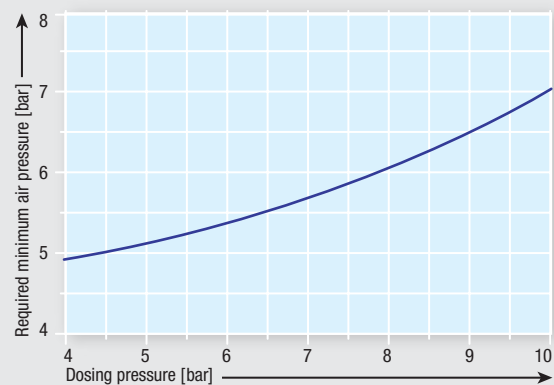

PreciCONTROL manages and verifies the injection ratio regarding correct ppm rates including requirements for line cleaning at the end of a batch and additive tank inventory monitoring, advanced alarming and accounting.

Injection pressure	4-10 bar
Necessary pn. pressure	5-7 bar
Weight	4.2 kg
FF 25/71 micro filter	10 µm mesh size
Self-priming	yes
Size D x H	100 mm x 169 mm
